Subject: Re: New Notices - historic concerns

Only that the company has not given me a 60-day notice of intent to commence operations as is required by the lease. DOGM should not issue a mine permit because the Lessee does not have permission from SITLA to actually commence any operations upon the lands.

I ran the lease application by you at the time that we presented it to the Board for approval, in December 2000. The applicant said that he wanted a lease to mine volcanic aggregate from a cinder cone located upon the property. You responded that a cultural survey should be required for all disturbances. I have documented the lease file accordingly.

The Lessee needs to submit a notice of intent to SITLA.

Kenny:

We have received notice for two proposed mining/exploration projects. Both are on SITLA lands. Could you please let me know if SITLA has any archaeological or historic concerns so we can reply to the operator. I have already sent the information to SHPO.

1) American Gold Mining Corp - Gold Mountain - E/053/057 - Washington County. (I don't have your SITLA number for this site). It is located in the SE1/4 SE1/4 SE1/4 Section 32, T43S, R11W, Smithsonian butte quad.

and

2) Aggregate Products and Minerals Inc. - Black Mountain - S/027/099 - Millard County. SITLA lease number ML 48637-UM-OBA.

Thank you for your reply.
